

Fuel it

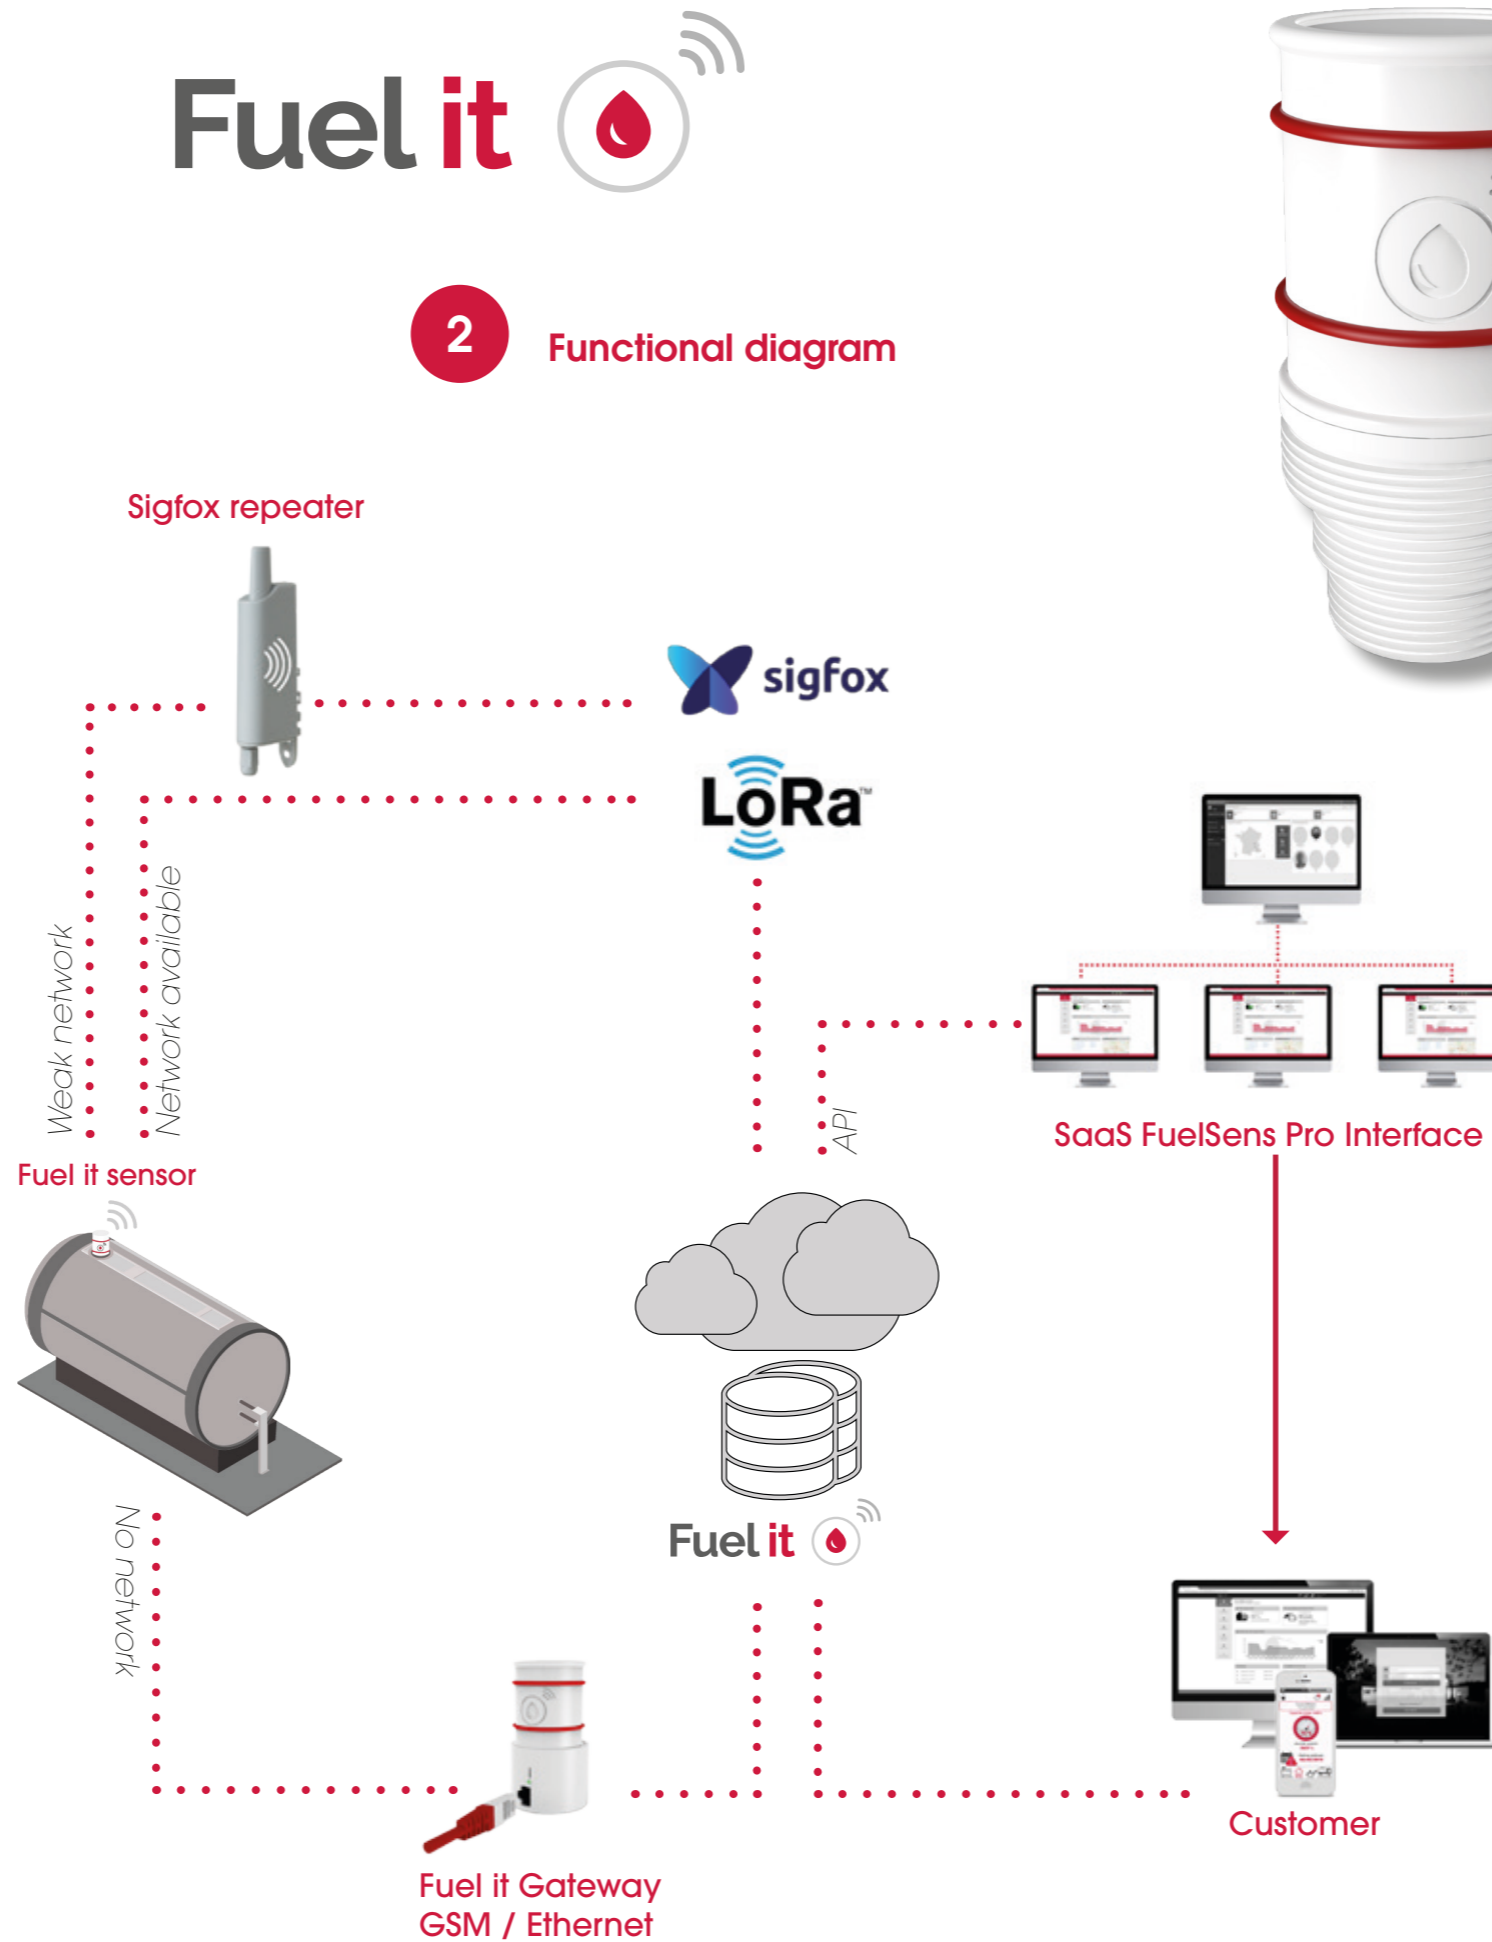

1 A Plug & Play Installation

A Plug & play installation, the fuel it sensor is installed **instead of the cap of your tank** and will therefore necessarily be accessible.

The Fuel it sensor has **3 screw threads**, allowing to adapt to all types of tanks! Its installation is easy, to activate it you must **pass the magnet** (supplied in the packaging) near the sensor; a blue light appears: **the installation is successfully completed!**

2 Functional diagram

Fuel it it's:

Connected sensors ...

Designed and produced by our teams, working with numerous customers: farmers, logisticians, data centers, industrialists, private individuals, etc.

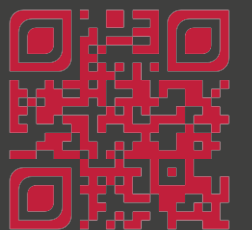

A robust & reliable solution.....

Allowing a data management of your customers in the respect of the RGPD

A service adapted to your needs... ..

- Immediate assistance
- Possibility white mark
- Customizable web offer

Scan and discover!

What are the issues?

- Build loyalty among your professional customers or individuals
- Know their needs and anticipate them
- Simplify the management of orders and service requests
- Avoid peaks in activity and optimize your logistics

What solutions?

- Wireless connected sensors (Sigfox - LoRa - Wifi - Gateway)
- Autonomous battery sensors
- Multi-tank fonctionnement
- Supervision software for data according to your type of customer

Fuel it's proposal:

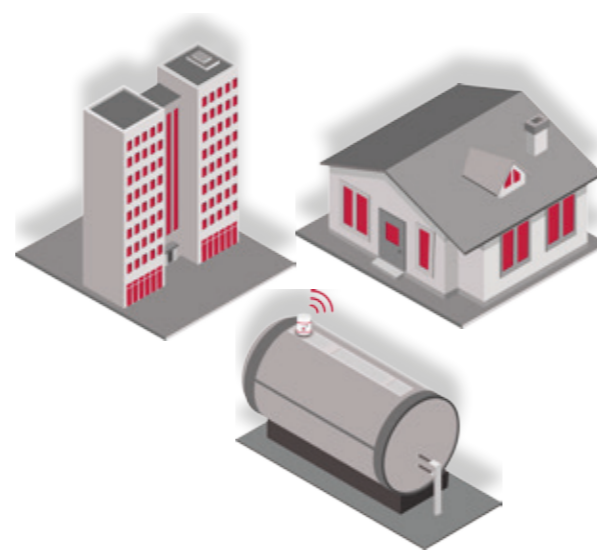

- Provision of sensors
- Installation training for your teams
- Assistance in setting up the tool
- Data management on your FuelSens platform
- Alerts (SMS, email) multi-criteria on all media

Our use cases

1

Fuel oil heating

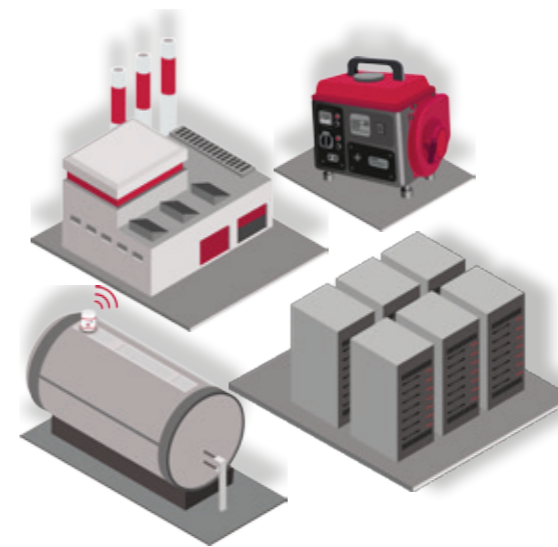

Few residents monitor the level of their fuel tanks daily. They are often surprised in the middle of winter. They need a simple and effective alert tool.

2

Tank for generator set

Generating sets ensure the continuity of service of the most critical equipment (data centers, jails, hospitals, etc). The level of their fuel tanks must be monitored very regularly.

3

Fuel Storage (GNR, AD Blue etc)

A vehicle works best with a full tank. Fuel it helps farmers as well as float managers who use internal fuel storage facilities. They want to precisely monitor their consumption and manage filling.

Our value proposition

1

Data connected directly to your ERP

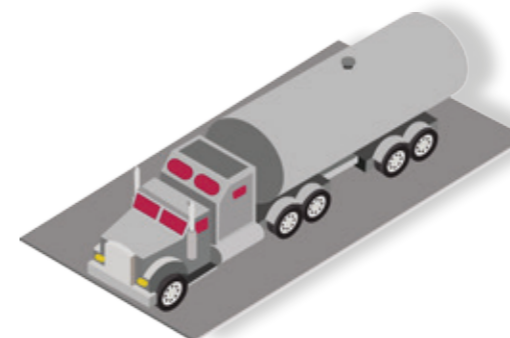

Customer data accessible in SaaS on your tool and compatible with your CRM or ERP via our API.

2

Operational optimization

By anticipating breakdowns and ranking your customers by criticality, Fuel it's algorithms offer you new operational optimizations.

3

Management and steering tool

- Calculate your daily consumption
- Follow your fillings
- Simplified inventory
